Environmental policy – AGES Värnamo AB

We are a leading company in advanced machining with expertise in turning, grinding and assembly in metallic materials in medium to large series. Our focus is on customer satisfaction and profitability. Our customers are in the automotive- and engineering industries in northern Europe.

We take our environmental responsibility seriously by complying with applicable laws and customer requirements and actively working to constantly improve our environmental performance, reduce natural resource consumption and minimize our environmental impact.

We achieve this by:

- Taking proactive measures to save energy and constantly striving for the lowest energy consumption
- Minimizing waste from our processes
- Reducing water and air pollution through our reuse and recycling practices
- Using high-efficiency machines and equipment with low environmental impact
- Utilizing 100% renewable energy from solar, wind and water sources
- Practicing responsible chemical management by reducing the number of chemicals and replacing existent chemicals with more environmentally friendly alternatives
- Preventing disruptive noise for internal and external stakeholders
- Reducing greenhouse gas emissions (GHG)
- Practicing responsible waste management in collaboration with certified and approved partners

We are responsible for educating and motivating our employees to perform their tasks in an environmentally responsible manner. Each employee, in turn, takes responsibility for following procedures and instructions, as well as being attentive to and promptly reporting any risks to the internal and external environment. We also engage in active dialogue about our environmental work with other stakeholders such as customers, suppliers, contractors and authorities in order to achieve common improvements.

When making decisions about investments or other changes in the business or the external environment, we will conduct cross-functionally assessments of environmental risks and assess consequences from a life cycle perspective.

Environmental issues must be an integrated part of daily operations and must be regularly reviewed and evaluated to provide a basis for ongoing environmental work and its targets. By integrating environmental responsibility into all aspects of our business, we are dedicated to preserving the environment for future generations while maintaining a strong commitment to sustainable practices.

Värnamo, 2023-10-06  Anders Linder, MD
